REC_DS using C_Week 2_COD_Question 1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: a b c -

Output: Forward Playlist: a b c

Backward Playlist: c b a

Answer

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
struct Node {  
    char item;  
    struct Node* next;  
    struct Node* prev;  
};
```

```
// You are using GCC
```

```
void insertAtEnd(struct Node** head, char item) {  
    Node * temp=(Node *)malloc(sizeof(Node));  
    temp->prev=NULL;  
    temp->next=NULL;  
    temp->item=item;  
    if(*head==NULL)  
    {  
        *head=temp;  
    }  
}
```

```

else
{
    Node * p=*head;
    while(p->next!=NULL)
    {
        p=p->next;
    }
    p->next=temp;
    temp->prev=p;
}
//type your code here
}

void displayForward(struct Node* head) {
    //type your code here
    Node * p=head;
    while(p!=NULL)
    {
        printf("%c ",p->item);
        p=p->next;
    }
    printf("\n");
}

void displayBackward(struct Node* tail) {
    //type your code here
    Node * p=tail;
    while(p!=NULL)
    {
        printf("%c ",p->item);
        p=p->prev;
    }
    printf("\n");
}

void freePlaylist(struct Node* head) {
    //type your code here
    Node * p=head;
    while(p!=NULL)
    {
        Node *a=p->next;
        free(p);
        p=a;
    }
}

```

```
}
```

```
int main() {  
    struct Node* playlist = NULL;  
    char item;
```

```
    while (1) {  
        scanf(" %c", &item);  
        if (item == '-') {  
            break;  
        }  
        insertAtEnd(&playlist, item);  
    }
```

```
    struct Node* tail = playlist;  
    while (tail->next != NULL) {  
        tail = tail->next;  
    }
```

```
    printf("Forward Playlist: ");  
    displayForward(playlist);
```

```
    printf("Backward Playlist: ");  
    displayBackward(tail);
```

```
    freePlaylist(playlist);
```

```
    return 0;
```

```
}
```
